v. 1.0	2023. 12. 15	First draft.	Choi Sooyoung

Create Firebase Admin SDK Key
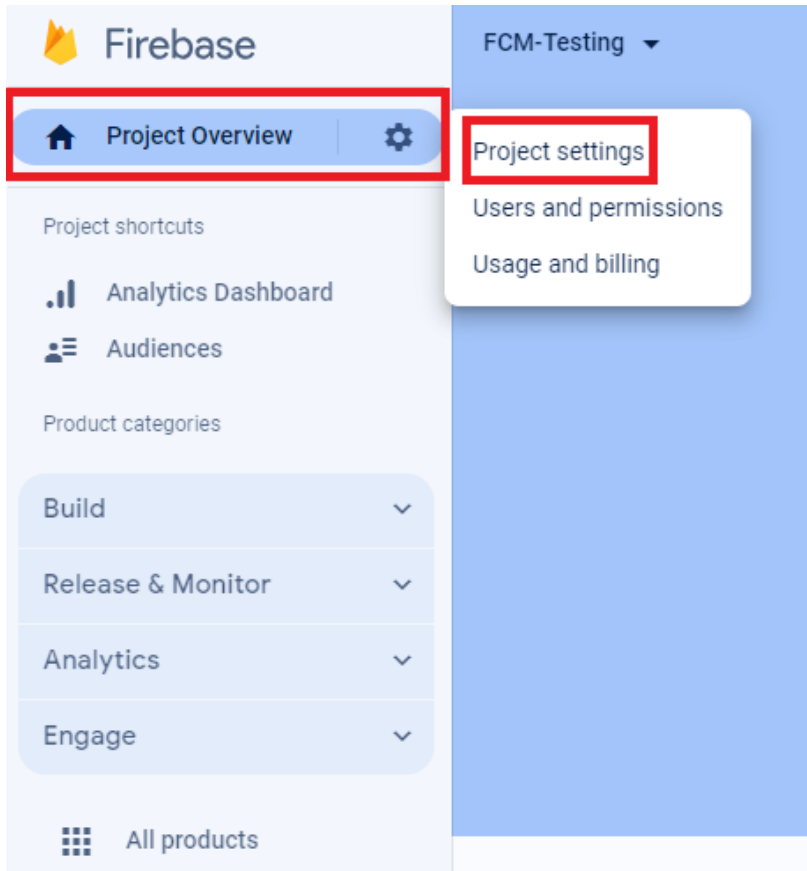

Please enter **[Project Overview]** > **[Project Settings]** of the FCM project in that order.

Create Firebase Admin SDK Key

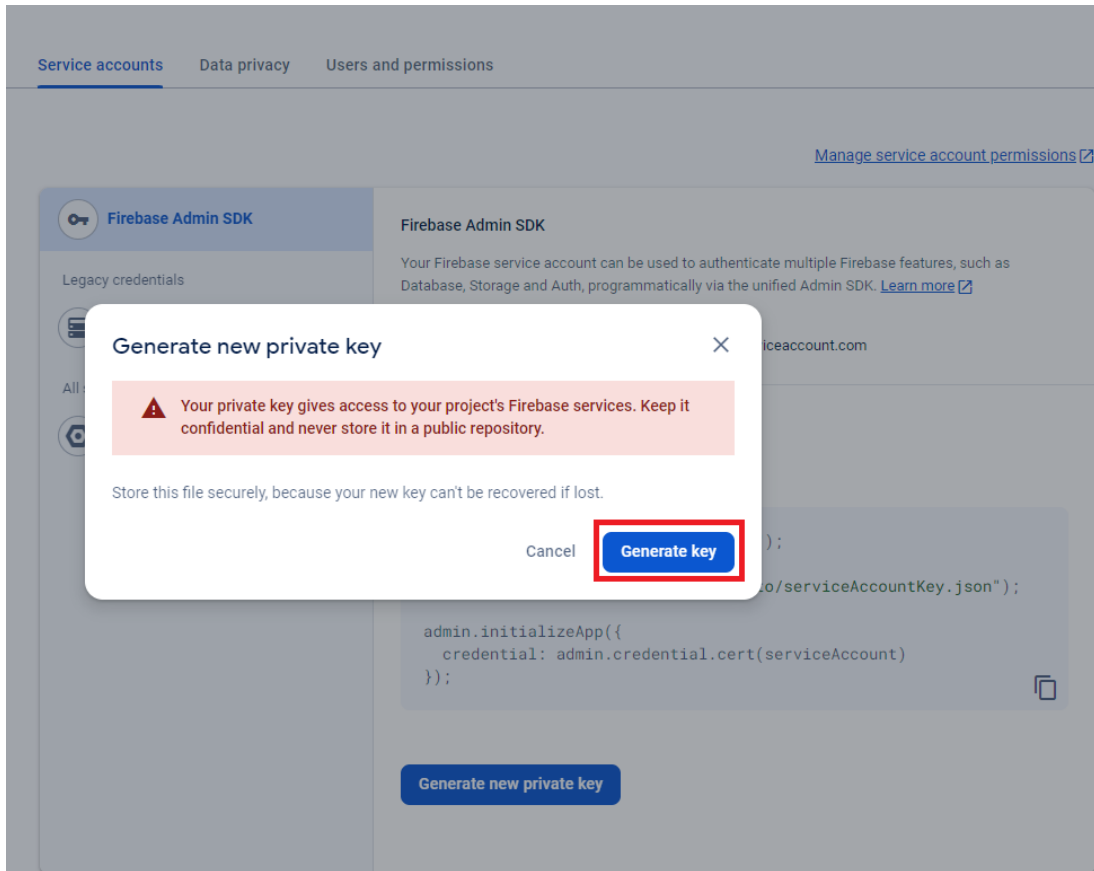

Please navigate to the **[Service accounts]** tab on the project settings screen.

Then, click the **[Generate New Private Key]** button under the **[Firebase Admin SDK]** section.

※ **(Important)** If you are already using Firebase Admin SDK in your FCM project, please provide the existing Firebase Admin SDK JSON file instead of generating a new private key.
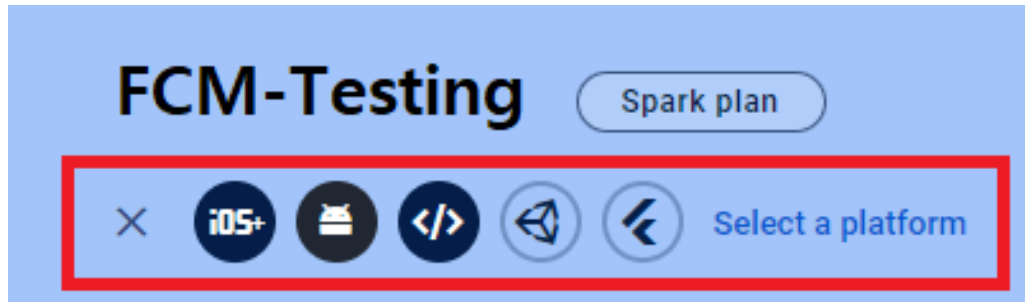

# Create Firebase Admin SDK Key

Please press **[Generate Key]** and send us the downloaded JSON file without changing its filename.

※ If you were using an existing Firebase Admin SDK on the previous page, this step does not apply to you. Please proceed to the next step.

For more information related to Firebase Admin SDK, please refer to the following link.

Add App

Please press the **[Add App]** button located at the top center of the project's main screen.

Afterwards, please select the platform of the client you want to add.

Add App

Please enter the necessary information for Firebase addition and proceed to the next step to complete adding the app project.

For detailed instructions on adding an app, please refer to the link below.
